

## **Pharmaceuticals and Medical Devices**

The medical device and pharmaceutical industries, especially in New Jersey and the Metro-New York region, are developing new technologies, products and services that are changing our way of life. These remarkable industries have created artificial organs and limbs, eased our pains, prevented major illnesses, cured our diseases and prolonged and improved our lives.

By innovating and adapting to new circumstances, our medical device and pharmaceutical clients demonstrate a new level of success in their fields. Sills Cummis & Gross understands the significant challenges these companies face related to regulatory compliance, patent protection, competition and product liability. We assist our clients by proactively responding to their needs.

Since Sills Cummis & Gross P.C. is headquartered in New Jersey, dubbed the “virtual medicine chest of the world,” it was natural for us to develop a niche in medical and pharmaceutical issues. We provide strategic legal advice on numerous transactional matters including mergers, acquisitions and divestitures; capital raising; manufacturing and distribution; and licensing, collaboration and technology transfer issues. Our vast litigation experience includes acting as national and local counsel in mass tort, major class action, and related product liability, warranty and infringement litigation; patent prosecution; business disputes; internal investigations and regulatory compliance matters. Our medical device and pharmaceutical practice is further supported by our litigation, health law, employment and labor and corporate internal investigations practice groups.

We have watched with pride as our clients have brought modern miracles to the marketplace, and we work hard to help them achieve their goals.
